

# GARDENS CAN MAKE A WILD IMPACT

Native plants provide natural sources of three elements of habitat:

## FEED THE BEES

Roughly **30 percent** of bee species restrict their diets to specific native plants.

## SAVE THE LAND

**1 million acres** of wildlife habitat are lost to suburban development every year.

## OAK POWER

Native oaks support over **500 species** of butterflies and moths.

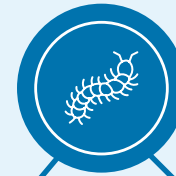

## EXTINCTION

Since the 1990s, Monarch butterflies have declined by **90 percent** due to the lack of native milkweed.

## ROOT FOR WATER

Native plant roots help with storm-water runoff, maintaining **healthy watersheds**.

## SUPPORT THE YOUNG

Native plants supply **thousands of caterpillars** and other insects for bird offspring.
